

INFORMATION SECURITY MANAGEMENT SYSTEM OBJECTIVES

Telit Power doo strive to achieve a completely reliable and secure management of information by defining and implementing the following objectives of information security:

- ✓ Establish a functional and effective system for identifying and controlling risks to information security by the end of the year;
- ✓ Establish and document the level of confidentiality of information within the organization;
- ✓ Define levels of access and use of the information in accordance with the classification of information and the organization structure, according to the degree of confidentiality of information, by the end of the current year;
- ✓ Increasing data and information security;
- ✓ Security and continual improvement of awareness and responsibility in the daily work of all stakeholders to the information security through continuous internal and external education, training, and verification of competence, as well as motivating employees to actively participate in the development of integrated management system;

In order to achieve the defined goals of information security, Telit Power doo maintains and continuously improves the management system of information security in accordance with the requirements of ISO / IEC 27001: 2015.

This initiative and the new ones that follow will help us to meet and exceed the demands of our customers/users and other stakeholders, in terms of information security, in every interaction.

The objectives of the information security management system, have been established by the top management of the organization in line with our strategic objectives.
